Klarna

Senior/Lead Data Scientist-Fraud

Data Science - Data Science · Milan · Full-time · €63,236 EUR - €90,429 EUR

Application

What you will do

- Build and deploy ML models to protect Klarna's customers from fraudulent activities (e.g. account takeover or identity theft fraud).
- Lead data science projects, from problem definition until deployment.
- Monitor, maintain, and retrain existing ML models in production.
- Explore, engineer, and test new potential features to help models in predicting fraud.
- Communicate with stakeholders on conceptual design, development, deployment, and risk control of the model, including writing documentation for external parties.
- Maintain the engineering platform/system used by the team to stay compliant with the company's requirements.
- Proactive in exploring novel ML/AI products to detect fraud.

Who you are

- Have an advanced degree (Master or Doctorate) in a quantitative field (e.g. statistics, computer science, engineering, mathematics, physics, or related fields).
- 5+ years of experience as a Data Scientist, ML Engineer, or related roles in the financial sector.
- 2+ years of experience working in fraud-related problem space.
- Experience in handling large sizes of customer data (e.g. >100 millions transactions with a few hundreds features).
- Deep proficiency in ML end-to-end process: conceptual design, model development, deployment in production, and monitoring, including pitfalls and tradeoffs to make.
- Deep understanding of business value to deliver: know when an ML solution is needed and when the model is good enough to be deployed for production.
- Good understanding of what metrics to use for monitoring and when to retrain ML models.
- Strong Python and SQL skills, including familiarity with ML modeling packages (e.g. scikit-klean, LGBM) and CI/CD or deployment tools (e.g. Docker, Jenkins, and uv).

- Familiarity with Github and AWS Cloud Computing (Sagemaker, Lambda, S3, Athena, etc).
- Ability to communicate effectively with Analysts, Engineers, and non-technical roles.
- Strong ability to translate business problems into analytical/technical solutions.
- Willingness to collaborate across different locations and time-zones (US and EU), but you will be working at common office hours in your time-zone. Traveling for one or two weeks per year may be needed to meet in-person with other group members.
- Eager to take ownership of a project and deliver results with minimal supervision.
- Agile to adapt to new changes in technology or engineering platforms used by the company.

Awesome to have

- Experience working in payment-related business, e.g. BNPL, credit card, or P2P transfer.
- Technical experience on utilizing Gen AI, Graph Networks, Anomaly Detection, or Behavioral Biometrics into production (beyond just prompting, fine-tuning, or proto-typing solutions).
- Familiarity with AI productivity tools for coding, e.g. Cursor or Github co-pilot.
- Familiarity with compliance and regulation around personal data privacy and model bias.
- Experience in mentoring junior data scientists.
- Experience with inferring the outcome of rejected orders due to fraud suspicion or credit unworthiness.

Please include a CV in English.
