Description

We’re not just building better tech. We’re rewriting how data moves and what the world can do with it. With Confluent, data doesn’t sit still. Our platform puts information in motion, streaming in near real-time so companies can react faster, build smarter, and deliver experiences as dynamic as the world around them.

It takes a certain kind of person to join this team. Those who ask hard questions, give honest feedback, and show up for each other. No egos, no solo acts. Just smart, curious humans pushing toward something bigger, together.

One Confluent. One Team. One Data Streaming Platform.

About the Role:

The Confluent Cloud Platform based on Apache Kafka is the leading Cloud Native Platform as a Service for streaming data infrastructure, but this is just the beginning. We are building a PaaS enabling customers around the globe to deliver streaming applications.

What You Will Do:

- Design, implement and maintain Golang infrastructure services (typically implemented as Kubernetes operators) to deliver the Confluent cloud

foundations to the wider engineering organization

- Kubernetes, Terraform, Datadog, Prometheus and a strong command of Linux, public cloud and networking should come as standard - though Golang software engineering will be your primary focus
- As a Confluent Cloud Infrastructure Software Engineer, you will be working alongside the rest of the Confluent engineers to build our PaaS product
- You, and the rest of the team, will be responsible for the provisioning, availability, performance, monitoring, emergency response, and capacity planning of the Confluent cloud
- If you love the hum of big data systems covering 10,000's of instances spread across 1000’s of kubernetes clusters in multiple cloud providers and thinking about how to make them run as smoothly and securely as possible, and want to have a big influence on the architecture plus operational design points of this new product, then you will fit right in.

What You Will Bring:

- BS, MS, or PhD in computer science or a related field, or equivalent work experience
- Strong fundamentals in distributed systems design and development
- Good understanding of the Kubernetes ecosystem
- Knowledge in building and operating large-scale systems
- Understanding of basic systems operations (disk, network, operating systems, etc)
- A self-starter with the ability to work effectively in teams
- Proficiency in Go, Python, C++, or other statically typed languages
- Experience/knowledge with public clouds (AWS, Azure or GCP)

What Gives You an Edge:

- Experience with Golang and a kubernetes CNI is advantageous
- Experience using Kubernetes is a big plus
- Relevant cloud infrastructure/cloud networking experience

Ready to build what's next? Let's get in motion.

Come As You Are

Belonging isn't a perk here. It's the baseline. We work across time zones and backgrounds, knowing the best ideas come from different perspectives. And we make space for everyone to lead, grow, and challenge what's possible.

We're proud to be an equal opportunity workplace. Employment decisions are based on job-related criteria, without regard to race, color, religion, sex, sexual orientation, gender identity, national origin, disability, veteran status, or any other classification protected by law.

Privacy Statement

Confluent is an IBM subsidiary which has been acquired by IBM and will be integrated into the IBM organization. By proceeding with this application, you understand that Confluent will share your personal information with other IBM affiliates involved in your recruitment process, wherever these are located. More Information on how IBM protects your personal information, including the safeguards in case of cross-border data transfer, are available here.

Leadership Principles Define How we Act

Our Leadership Principles outline a shared set of expectations for how we think and behave at Confluent. They're an extension of our company values which we all live each day. You can learn more here.

Confluent is Remote-First

We care about how you work, not where. Confluent is built for flexibility, so we encourage you to apply from anywhere. But we also know that trust and purpose are built face-to-face. That's why we combine remote freedom with in-person onboarding to jumpstart your journey. It's the best of both worlds: the autonomy you want with the community you need. Read why we prioritize in-person onboarding

Compensation

£62K – £72K • Offers Equity

At Confluent, we are committed to providing competitive pay and benefits that are in line with industry standards. We analyze and carefully consider several factors when determining compensation, including work history, education, professional experience, and location. The actual pay may vary depending on your skills, qualifications, experience, and work location. In addition, Confluent offers a wide range of employee benefits. To learn more about our benefits click here.
