# Who we are

## About Stripe

Stripe is a financial infrastructure platform for businesses. Millions of companies —from the world's largest enterprises to the most ambitious startups—use Stripe to accept payments, grow their revenue, and accelerate new business opportunities. Our mission is to increase the GDP of the internet, and we have a staggering amount of work ahead. That means you have an unprecedented opportunity to put the global economy within everyone's reach while doing the most important work of your career.

## About the team

The Proactive Threat team identifies, detects, and responds to threats before they impact Stripe's business or users. The Detection Engineering & Threat Hunting function sits at the intersection of offense and defense — we leverage deep knowledge of attacker tradecraft to build high-fidelity detections, hunt for sophisticated threats, and validate defensive capabilities across Stripe's critical systems.

We are builders first. Our team develops detection-as-code, automates analysis workflows, and builds tooling that scales detection and response across a complex, global environment. We partner closely with Threat Intelligence, Incident Response, and offensive security teams to ensure our detections are grounded in real-world adversary behavior.

The team is distributed across the United States (Eastern and Pacific time zones) and collaborates regularly with stakeholders across Stripe — including teams in Europe and Asia.

# What you

We use cookies to improve your experience and for marketing. Read our **cookie policy** or **manage cookies**.

Accept all Reject all

You will design, build
across Stripe's infras
leverage your understanding of attacker TTPs — from initial access through

exfiltration — to develop detection logic that catches real threats while minimizing noise. Beyond writing detections, you'll conduct threat hunts, perform malware analysis, and build automation that enables detection engineering at scale.

## Responsibilities

- Design, build, and tune high-fidelity detections across modern SIEM platforms, covering adversary TTPs across the full attack lifecycle
- Develop detection hypotheses by researching TTPs, identifying evidence sources, and determining detection opportunities across available telemetry
- Conduct hypothesis-driven threat hunts to identify malicious activity, uncover detection gaps, and validate security controls
- Perform malware analysis and reverse engineering to extract indicators and inform detection strategies
- Build network-based detections (flow, pcap, protocol analysis) and endpoint-based detections (event logs, EDR telemetry, memory/file artifacts) across Windows, Linux, and macOS
- Partner with Threat Intelligence to operationalize intel reports into detections, hunting leads, and enrichment logic
- Collaborate with IR, SOC, and offensive security teams to validate and refine detections based on real-world incidents and red team exercises
- Build data pipelines, automation, and tooling that enable detection-as-code practices and scalable deployment
- Map detection coverage to MITRE ATT&CK, identifying and prioritizing gaps across key attack surfaces
- Lead projects, mentor teammates, and champion quality standards within the team

## Who you

We're looking for someone who meets the minimum requirements to be

considered for the role. If you meet these requirements, you are encouraged to apply. The preferred qualifications are a bonus, not a requirement.

## Minimum requirements

5+ years of experience in detection engineering, threat hunting, or security operations

Demonstrated experience writing detection logic in modern SIEM platforms (e.g., Splunk, Chronicle, Elastic, CrowdStrike NG-SIEM, Panther, Microsoft Sentinel)

Strong understanding of adversary tradecraft across the attack lifecycle: initial access, privilege escalation, lateral movement, defense evasion, persistence, and exfiltration

Ability to extract TTPs from threat intelligence reports and translate them into detection opportunities

Experience developing network-based and endpoint-based detections across multiple OS platforms (Windows, Linux, macOS)

Experience analyzing telemetry across endpoint, network, cloud (AWS/GCP/Azure), identity, and application log sources

Proficiency in detection/query languages (SPL, KQL, EQL, YARA-L, SQL) and programming (Python or similar)

Strong communication skills with the ability to document detection logic and explain findings to technical and non-technical audiences

Adversarial mindset — understanding how attackers operate to build detections that catch real-world threats

## Preferred qualifications

Experience in de
services, or highl

Background in m

Experience with
security to validate detections

We use cookies to improve your experience and for marketing. Read our **cookie policy** or **manage cookies**.

Accept all Reject all

Familiarity with big data platforms (Databricks, Trino, PySpark) for large-scale log analysis

Proficiency with AI/LLM-assisted development tools (Claude Code, Cursor, GitHub Copilot) applied to detection workflows

Interest in agentic automation — using LLMs to augment hunting, tuning, or triage

Experience with detection validation tools (Atomic Red Team, ATT&CK Evaluations)

Contributions to open-source detection content, research, or conference presentations

Relevant certifications such as HTB CDSA, GCIH, GCFA, GNFA, OSCP, TCM PMAT, or GREM

## Hybrid work at Stripe

This role is available either in an office or a remote location (35+ miles or 56+ km from a Stripe office).

### In-office expectations

Office-assigned Stripes spend at least 50% of the time in a given month in their local office or with users. This hits a balance between bringing people together for in-person collaboration and learning from each other, while supporting flexibility about how to do this in a way that makes sense for individuals and their teams.

### Working remotely at Stripe

A remote location is defined as being 35 miles (56 kilometers) or more from one of our offices. While you would be welcome to come into the office for team/business meetings, on-sites, meet-ups, and events, our expectation is you would regularly work from home rather than a Stripe office. Stripe does not cover the cost of relocating to a remote location. We encourage you to apply for roles that match the location where you currently live or plan to live.

## Pay and ben

The annual salary

€136,200. This range may change if you are hired in another location

Accept all Reject all

$166,200. This range may change if you are hired in another location.
For sales roles, the range provided is the role's On Target Earnings ("OTE") range, meaning that the range includes both the sales commissions/sales bonuses target and annual base salary for the role. This salary range may be inclusive of several career levels at Stripe and will be narrowed during the interview process based on a number of factors, including the candidate's experience, qualifications, and specific location. Applicants interested in this role and who are not located in the primary location may request the annual salary range for their location during the interview process.

Specific benefits and details about what compensation is included in the salary range listed above will vary depending on the applicant's location and can be discussed in more detail during the interview process. Benefits/additional compensation for this role may include: equity, company bonus or sales commissions/bonuses; retirement plans; health benefits; and wellness stipends.

**Please find our EU applicant personal information notice here.**

## We look forward to hearing from you

At Stripe, we're looking for people with passion, grit, and integrity. You're encouraged to apply even if your experience doesn't precisely match the job description. Your skills and passion will stand out—and set you apart—especially if your career has taken some extraordinary twists and turns. At Stripe, we welcome diverse perspectives and people who think rigorously and aren't afraid to challenge assumptions. Join us.
