Klarna

Senior Python Engineer

Engineering · Stockholm, Milan · Full-time · kr 752,814 SEK - kr 843,151 SEK

Application

What you'll do

- Build and maintain Python and SQL based systems for data pipelines, analyses, monitoring, and automated alerting
- Evolve Klarna's abilities to measure and monitor its business critical metrics from an AI-driven perspective
- Own projects end-to-end in time-boxed phases: scoping (1-2 weeks) → building → deploying → iterating
- Present technical work and tradeoffs to senior leadership
- Support and maintain what you build – no throwing projects over the wall
- Work publicly in Slack channels with radical transparency (all work visible to the team)

Who you are

- AI-First Engineer: Heavy hands-on experience with OpenAI/Anthropic APIs, prompt engineering, and AI-assisted coding tools (Cursor, GitHub Copilot, Claude Code, etc)
- Tech Stack Flexible: Comfortable working across Python, Docker, AWS, APIs, databases – you adapt to the problem, not the other way around
- Business-Oriented: You translate stakeholder needs into technical solutions and care about why we're solving a problem, not just how
- Iterative Shipper: You build MVPs in 1-2 week cycles, gather feedback, and iterate quickly
- Change Resilient: You thrive when priorities shift, requirements evolve, and ambiguity is the norm
- Self-Driven: You proactively unblock yourself, drive projects forward, and communicate openly in public channels

Awesome to have

- Go coding language
- Good understanding of common design patterns and comfortable with modern Python 3

practices (type hints, protocols, Pydantic, uv)
- Experience with Terraform, Airflow, Slack API, OpenSearch, SPARQL, CI/CD
- Track record of maintaining production systems while building new features
- Background working with cross-functional stakeholders in product, analytics, and business operations
- Comfort working in highly transparent, documentation-heavy environments
- Experience killing or rescoping projects that aren't delivering value
